

Hey Belfius

It all starts with a
conversation

21st of April

We proudly launched Hey Belfius, our brand-new Personal Assistant enabling an enhanced experience & better servicing

x2

+90%

**That result isn't the model's
achievement.**

That result isn't the model's
achievement.

It's the architecture's.

= Every demo you've seen is these two boxes

What demos give you

Understands the words.
Writes a fluent reply.

But...

Doesn't know your bank,
can't see your accounts, can't
do anything.

**Customers don't expect
intelligence.**

= They Expect it to be

01. True

Grounded on curated data

02. About me

Through a personalized experience

03. Useful

Fluently guiding through

04. Done

By performing actions

Be True

Leverage diverse sources for a superior customer service

Financial education

Phishing/Fraude

FAQ information

Do Elevate Conversational Experiences with End-to-End Flows

Get Credit Card

Unblock/ Block Card

Change Limit

Be Personalized

Empowering clients with tailored analytics to transform complex data into actionable insights.

Hey Belfius gives clients the possibility to request tailored analytics and insights, making complex data understandable, relevant and actionable.

*How much did I spend on ...
(shopping, bars & restaurants,...)*

*How much did I spend at ...
(Point of sale, merchant,...)*

How much did I spend in a certain timeframe.

= So how do we make customer expectations reality?

What demos give

What customers expect

**The LLM is not the
architecture**

The LLM is not the
architecture

The harness is

= The model creates intelligence. The harness turns it into trusted behavior.

Generative in the conversation. Controlled in the outcome.

Use flexibility where language adds value. Use control where correctness is non-negotiable.

Customers do not remain inside one box

A conversation can change problem type at every turn.

Secured by design

Launch is day one

= Building it is only half the job

Evaluation is part of the architecture, not a gate at the end of development.

1. Agentic AI is a systems-engineering problem

The model is only one component

2. Intelligence needs a harness

Context, safety, orchestration and experience matter as much as reasoning

3. Production is the beginning, not the end

Observability, evaluation and continuous improvement are fundamental.

Hey Belfius
